dekkko

pool lighting systems

The method of servicing pool lights hasn't changed much over the past 70 years. Still utilizing a wet niche with coiled wires, the light is pulled through the water to be serviced on the deck; even for such a simple procedure as changing a failed bulb.

The 'dekkko' is the world's first UL listed light that allows servicing ENTIRELY from the safety and convenience of the pool deck. Bulbs are replaced in as little as 3 mins, upgraded to LED in less than 5 mins – and all coming with a 3-year warranty.

The specific safety features are that the electrical cables do not come into contact with any water at any time and the service technician can service the lights in a quick, dry and safe environment.

Benefits over all other lighting systems include:-

Safety - All servicing is carried out quickly and safely from the pool deck, with no electrical cables coming into contact with any water at any time.

Leaks - Because the seals around the light unit are not disturbed during servicing, the risk of leaks developing is greatly reduced.

Serviceability - Accessed from the deck, there is no niche, no grounding and no snaking required.

Flexibility - The modular design of dekkko allows a simple and quick upgrade from halogen to LED.

Material - A high quality ASA polymer is used resulting in excellent tolerance against UV, mold and temperature fluctuation.

Contamination - Debris does not get dispersed into the pool during servicing.

Warranty - dekkko comes with an industry leading 3 year limited warranty.
